

2. **CODONORCHIS** Lessonii.

C. foliis 2-4 ovatis acutis, labelli laminâ ovato-subrotundâ acuminatâ obtusiusculâ : glandulis basi aggregatis elongatis superiùs abbreviatâ versus apicem papillæformibus.

Calopogon Lessonii. *Ad. Brongn. in It. Duperrey p. 188. t. 37. f. 1.*

$\beta.$  foliis obovatis obtusis minus membranaceis, floribus majoribus.

Hab. in insulâ Staten, Webster ; in Chile prope Valdiviam ad “ los Canellos” locis umbrosis, Bridges 767 ;  $\beta.$  ad Caput Horn, Eyletts. (hab. s. sp. ;  $\beta.$  v. s. sp. in Hb. Hooker.)

The var. a. differs from  $\beta.$  in its thinner and more acute leaves, and much smaller flowers ; the latter may be a distinct species.
