

9. *P. chloroleuca* ; folio ovato-lanceolato caule multò longiore,
floribus sub folio dense aggregatis, sepalis aristatis lateralibus omnino
connatis, petalis setaceis brevioribus, labello oblongo cuspidato
bilamellato nano.

“An epiphyte, from the neighbourhood of the Salta of Tequendama, in the
province of Bogota, at the height of 8000 feet; March. Flowers yellow, with
a white and green lip.” (No. 1269).

Near *Pl. succosa*, but ten times as large.
